## CHRONICLE

Marie Curie was a very smart woman, she was born in Warsaw, Poland in 1867, Her real name was Maria Salomea Skłodowska, she loved to learn, When she was young, on women couldn't study at the university in Poland so she moved to France to study science in Paris.

In Paris she met a man named Pierre Curie, he was also a scientist, they got married and worked together, they studied a special thing called radiation. Marie and Pierre discovered two new elements polonium and radium these were very important in science.

In 1903 Marie and Pierre Curie won the Nobel Prize in Physics it was a big moment and Marie was the first woman to win a Nobel Prize after her husband died and she continued her work alone In 1911 she won another Nobel Prize this time in Chemistry, She was the first person to win two Nobel Prizes.

Marie Curie helped many people during the first world war, she used her science to help doctors with X-rays, she was very brave and strong also she worked hard all her life.

Marie Curie died in 1934. She got sick because of her work with radiation. But her work changed the world. today many people remember her as a great scientist and a hero.
